Portfolio: deekshak.site · Live: app.deekshak.site · [GitHub](https://github.com/Deekshak11) · [LinkedIn](#)

SUMMARY

I build multi-agent and automation systems teams can actually run: plan locks, RAG, n8n GTM/ops workflows, voice agents, and production deploys. Flagship is **Business OS** (live product and walkthrough on portfolio). Working **HVAC voice agent**: two public use-case videos. Case studies, n8n canvases, and agent architecture: deekshak.site. Diploma in Computer Science (**9.82 CGPA**, June 2024); college and school in **Bengaluru, India**. Strength is **orchestration and outcome ownership**, not notebook demos.

SELECTED SYSTEMS

Business OS — Multi-agent product (flagship)

2026 · Live: app.deekshak.site · Demo: youtu.be/VluVrRgLn9c · Code: github.com/Deekshak11/business-os

- **Problem:** Business AI chat dumps ideas and stops. Teams need a path from a fuzzy request to an approved plan and real artifacts.
- **Built:** RAG strategist on a dense Hormozi vault (3 books + 12 playbooks); Copy specialist on Copy OS (14 vault docs, 112 frameworks, 600+ swipe files, 58 checklists). Human plan lock → specialists → paste-ready outputs.
- **Ship:** Public production demo (React + FastAPI/Modal + Chroma RAG). Built primarily with Grok Build. Live app and walkthrough on portfolio.

HVAC voice agent — missed-call recovery

2026 · Daytime: youtu.be/plnW4h-F1t4 · After hours: youtu.be/4CNmYzvxe9U · [@deek-shak](#)

- **Problem:** A roughly \$1M HVAC shop loses the job when lunch, overflow, or after-hours calls hit voicemail. The caller dials the next listing.
- **Built:** Inbound voice agent for demo shop Sunshine Air. Collects name, phone, address, ZIP. After hours: \$189 tonight on-call page or first morning window. Daytime: first-ring answer, callback or morning hold. n8n writes the job to the owner board.
- **Proof:** Both videos show the live web call. The \$60k and \$94k figures are models for a ~\$1M shop, not a named client result.

Production n8n systems (4)

2025–2026 · Canvases: deekshak.site/#work · Repo: github.com/Deekshak11/automation-systems · Triggers + AI steps + review paths where send risk is high

- **AI BDR / GTM Engine:** agency enrich, Apollo scrape, Instantly campaigns, email verify.
- **AI Email + RAG Responder:** inbox, classify, RAG draft from docs, review, send.
- **HubSpot Enrich + Outreach:** CRM contact, social scrape, AI personalize, Gmail.
- **AI Lead Research Engine:** Sheets leads, company research agent, sales draft, controlled send.

Agency OS (Antigravity) — Autonomous outbound factory

Late 2025–early 2026 · github.com/Deekshak11/agency-os · Explained on portfolio

- **Problem:** Spray-and-pray outbound kills boutique trust; hand personalization does not scale.
- **Built:** Batch Golden Sheet/GDoc cloning for Fractional CFO magnets on Modal; OAuth volume auth; SOPs and agent files (AGENTS / MEMORY / STATUS); quality gates, no silent low-quality fallbacks.

Show-Rate Guardian — Agentic revenue protection

Late 2025 · github.com/Deekshak11/show-rate-guardian · Shadow system · explained on portfolio (runtime retired)

- **Problem:** Booked sales calls no-show; generic reminders ignore risk, channel, and timing.
- **Built:** Risk score, channel and timing, multi-channel reminders, outcome log. Maps AI to show rate and protected meeting revenue.

Supporting delivery

- **TechYzer (2025, independent collab):** Landing, GTM research, and community engagement for a US dermatology growth offer (~5–6 months). Not formal employment.
- **Client websites (mid 2024):** Live pantherfitness.in and k2salon.in; brand searches #1 in local context.
- **Automation foundations (2024–early 2025):** Make / n8n / Zapier with retries and dead-letters; reliability layer for later agent systems.

TECHNICAL SKILLS

Agentic / AI	Multi-agent orchestration, plan approval / HITL, RAG (Chroma), voice agents, LLM APIs, structured outputs
Automation	n8n, Make, Zapier, webhooks, HubSpot, Google Workspace APIs, retries / dead-letters
Build & ship	Python, FastAPI, React, TypeScript, Modal, Vercel, Docker · live demos, GTM support
Agentic tools	Tool-agnostic: Grok Build, Hermes, OpenAI Codex, Antigravity, peers

EDUCATION

Diploma in Computer Science · Rajiv Gandhi Memorial Polytechnic, **Bengaluru, India** · 2021 – June 2024 · **9.82 CGPA**

Class 10 (CBSE) · Vidya Vahini School, RHCS Layout, **Bengaluru, India** · **91%**

CERTIFICATIONS

Build-first learning: courses are secondary baselines. Market feedback comes from shipping (see portfolio).
